Grease Filter Exchange Program

Averus is there for you every
step of the way including
our Grease Filter Exchange
Program.

Did you know...

Running your filters through the dishwasher will only clean the surface of the filter? All baffle filters have an open-side offset honeycomb shape, designed to capture the most contaminants as the air tumbles through them. A clean filter can capture up to 30% of contaminants in the air to reduce buildup in your exhaust system. Because filters are directly over the cooking equipment they can easily catch fire, so cleaning the entire filter — inside and out—is critical to safety. How much does a filter weigh? After you clean the filter it should weight approximately the same as it did when it was brand new, otherwise grease and build up are still caught inside the baffles.

Cost Effective

How much are you spending to unclog the dish sink or drains due to grease build-up? Degreasers, hours cleaning, dishwasher maintenance, grease trap clean out, even occasional work comp claims from cuts — all these expenses from filter maintenance; our program is an affordable option without all the hassle – **WE COME TO YOU AND TAKE THE GREASE WITH US!** Standard baffle filters and spark arrestor filters available.
